DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 2. Claims 1-5, 7-15, 17-29 are rejected under 35 U.S.C. 102(e) as being anticipated by Halpern(2006/0239453).
- 3. As per claim 1, Halpern discloses an integrated encryption key generator [0022, 0045]; a data buffer[0063]; an input/output register that interfaces with memory of the digital device[0050], and a memory controller that directs digital data from the memory to the data buffer with the digital data passing thorough the encryption key generator prior to entering the input/output register[0063].
- 4. As per claim 2, Halpern discloses an inaccurate clock[0015] a key store[0045] and a linear feedback shift register[0014]generates a pseudorandom bit pattern while the linear feedback shift register is enabled and stores a plurality of bits as at least one key in the key store[0014, 0063].
- 5. As per claim 3, Halpern discloses where the encryption key generator further includes a random number generator that receives the pseudorandom bit pattern from the linear feedback shift register and provides a random number for use by the digital device[0039, 0050].

Application/Control Number: 10/611,402

Art Unit: 2439

6. As per claim 4, Halpern discloses pseudorandom bit pattern that creates a bit stream; and

Page 3

a key store that stores portions of pseudorandom bit pattern as the at least one keys[0050, 0063].

7. As per claim 5, Halpern discloses including a pseudo random number generator that

selects a portion of the pseudorandom bit pattern to be random number[0052].

8. As per claim 7, Halpern discloses a subkey that creates a sub-key based on data from the

memory controller and a selected key from the key store; and a combiner that combines the sub-

key with the digital data[0069].

9. As per claim 8, Halpern discloses a data mixer that mixes the bits of a byte of digital

data; and a combiner that combines the byte of the digital data prior to the byte being combined

with the sub-key[0062, 0069].

10. As per claim 9, Halpern discloses a memory controller that generates a memory request

to retrieve the encrypted digital data; and encryption circuit with a plurality of key that decrypts

the encrypted digital data in response to the memory request of the memory controller [0045-

0046]

11. As per claim 10, Halpern discloses a combiner that combines one of the plurality of keys

with a bank and row information contained in the memory request resulting in a sub-key[0062,

0069].

12. As per claim 11, Halpern discloses a data mixer that unmixes bits within a byte after the

sub-key is applied to encrypted digital data[0062, 0069].

Art Unit: 2439

- 13. As per claim 12, Halpern discloses generating at least one key, placing the digital data in a data buffer; and encrypting the digital data using the at least one key while the digital data is being placed[0022, 0045, 0063].
- 14. As per claim 13, Halpern discloses generating of an inaccurate clock signal[0063], creating a pseudorandom bit pattern, and storing at least one portion of the pseudorandom bit pattern in a key store as the at least one key[0052].
- 15. As per claim 14, Halpern discloses where the pseudorandom bit pattern is generated by a linear feedback shift register[0064].
- 16. As per claims 15, 21, Halpern discloses generating a random number from the pseudorandom bit pattern[0039, 0050].
- 17. As per claim 17, Halpern discloses selecting a portion of the pseudorandom bit pattern to be used a random number[0050].
- 18. As per claim 18, Halpern discloses mixing the bits of a byte of the digital data with a data and combining the byte with the at least one key[0062, 0069].
- 19. As per claim 19, Halpern discloses generating a sub-key with data from the memory controller and the key; and combining the sub-key with the digital data[0069].
- 20. As per claim 20, Halpern discloses mixing the bits of byte of digital data with a data mixer; and combining the byte with the sub-key[0050].
- 21. As per claim 22, Halpern discloses generating a memory request to retrieve the encrypted digital data; and decrypting the encrypted digital data using at least one key[0045-0046].
- 22. As per claim 23, Halpern discloses combining the at least one key with a bank and row information contained in the memory request to generate a sub-key[0062, 0069].

23. As per claim 24, Halpern discloses unmixing a byte of encrypted digital data with a data mixer[0069].

Page 5

- 24. As per claim 25, Halpern discloses an encryption circuit with at least one key, a data buffer filled with the digital data[0022, 0045, 0063], a memory controller that directs and the storage of digital data in the rewriteable memory with the digital data being encrypted by the encryption circuit and the at least one key after the digital data has entered the data buffer but prior to being stored in the rewritable memory[0063].
- 25. As per claim 26, Halpern discloses a pseudorandom bit stream generator that creates a pseudorandom bit stream; and a key store that stores the at least one key that is selected from the pseudorandom bit stream[0052].
- 26. As per claims 27, Halpern discloses a data mixer mixes the bits of a byte of the digital data; and a combiner that combines the byte with the key[0050].
- 27. As per claims 28, Halpern discloses wherein the memory controller that directs digital data from the memory to the data buffer with the digital data passing through the encryption key generator prior to entering the input/output register comprises means for encrypting the digital data prior to entering the input/output register[0063].
- 28. As per claim 29, Halpern discloses wherein the encryption circuit further comprises an inaccurate clock[0015].

Response to Applicant

29. The Examiner previously rejected claims 1-5, 7-15, 17-27 in office action dated 4/4/08. The Applicant amended claims 1-2, and 13. The Applicant added new claims 28-29 on 7/11/08.

The Applicant's arguments are moot in view of amendments to the claims. Applicant's arguments are moot and final necessitated by Applicant amendments.

Final Necessitated by Amendment

30. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to JENISE E. JACKSON whose telephone number is (571)272-3791. The examiner can normally be reached on Increased Flex time, but generally in the office M-Fri(8-4:30).

Application/Control Number: 10/611,402 Page 7
